How **Green** is
your footprint?

Spray⁺ is a soluble formula applied to chicken houses, nesting boxes, perches, bedding and their surroundings. Spray⁺ applied to the bedding assists in the suppression of any harmful micro-organisms that could cause diseases in the chicken house, with the manure drying quicker and making it less odorous.

This product is applied after cleaning and prior to introducing the chickens to the shed/hen house. For broilers, this is generally applied just prior to introducing day old chicks. For layers, we recommend regular intervals of spraying in line with required cleaning programmes with more in the summer. Spray⁺ assists in promoting a healthy environment

Breathe⁺ is a water-soluble respiratory spray comprising a blend of natural essential oils which provides symptomatic relief for breathing difficulties. Emvelo Breathe⁺ helps to liquefy thick, sticky mucous and open up breathing passages. Breathe⁺ is applied as a very fine mist within the hen houses both morning and evening for about three days or as required.

Benefits

Emvelo products work together to demonstrate:

- Natural suppression of the growth of harmful micro-organisms in your birds' surroundings by balancing the bacteria in the environment.
- A more pleasant housing environment for your poultry with lower ammonia levels which is generally sweeter smelling, thereby reducing possible stresses on your birds' respiratory systems.
- Shown to deter annoying insects without the use of chemicals or pesticides and may assist in the control of mites and flies.
- Lab test show that the products can assist in control of disease such as E.Coli, Salmonella and Campylobacter.
- Freedom from chemicals and pesticides can often make birds happier and far more responsive.
- The manure is less offensive, can be composted directly and shown to be excellent quality.
- No harmful side effects or withdrawal.

Reduce Stress Now
with Emvelo Spray⁺ and
Breathe⁺

Healthy flocks thrive within an Emvelo Environment

Whenever Emvelo is used, habitats, but more importantly effluent, is sweeter smelling, freer of pathogens and populated with beneficial micro-organisms. It now has a lower biological oxygen demand (BOD) and zero chemical oxygen demand (COD). This means effluent will compost more easily and in some cases can be used for manure immediately without fear of polluting fields, streams, rivers and dams.

Whether it's odour control, freedom from annoying insects or relief from sniffles, Emvelo is what you need. Give your birds something to crow about!
